

Daniel Bodi Gil

Senior Product Designer & UX Engineer - Design Systems

Morlanwelz, Belgium | +32 497 89 75 04 | daniel.bodi.gil@gmail.com | danielbodigil.com | linkedin.com/in/danielbodi

PROFESSIONAL SUMMARY

Product designer and UX engineer with 15 years across interface design, front-end delivery and design systems for complex enterprise products in healthcare, mobility, banking and telecom. Bridges product direction, UX architecture and implementation through Figma, Storybook, design tokens, CSS/Angular architecture and production UI collaboration. Recent work focuses on design systems governed for both people and AI-assisted development.

CORE COMPETENCIES

Design systems & tokens | Storybook | Figma | UX research & task-based testing | Prototyping | Information architecture | ITCSS/BEM | Angular & TypeScript | PrimeNG theming | Accessibility (WCAG AA) | Design ops & governance | AI-assisted development governance | Design-development collaboration

WORK EXPERIENCE

Solidaris (via Cegeka)

UX Engineer / Design System Owner | Oct 2025 - Present | Belgium

Sole embedded consultant evolving Plectrum, the PrimeNG-based design system, and modernising a connected healthcare application ecosystem spanning iCRM, iShare and iGED.

- Built a machine-readable governance layer with component contracts, nine rules, four skills, four protocols and a seven-role AI-agent workflow so AI-assisted code follows design-system constraints by default.
- Mapped 170+ Figma variables into a three-tier token architecture that bridges semantic Plectrum tokens to PrimeNG CSS variables; two production applications consume the shared system.
- Defined a cross-product case-reading model so employees can understand an affiliate's situation without reassembling tickets, documents and workflows across separate tools.
- Conducted employee shadowing and card sorting with 20+ users, and ran scenario-based tests comparing journey models; the validated hybrid informed a reusable Plectrum case pattern.
- Designed high-fidelity interfaces and built coded iShare and iGED mockups on Plectrum to test product decisions against the real component system.

Bridgestone (via CTG/Cegeka)

UX Engineer / Design System Owner | Jun 2019 - Jun 2025 | Belgium

Progressed from sole designer to leading design workflows on FleetBridge, a fleet-management platform, and built its design-system foundation.

- Made CSS the single source of truth: live tokens feed the applications and a self-populating Storybook with 39 stories and 51 MDX documents generated from the browser CSSOM.
- Architected 254 SCSS files across eight ITCSS layers with BEM naming, plus a browser-derived colour system that expands 15 base hues into approximately 250 tokens per theme.
- Delivered 40+ reusable components and guidelines; the development team reported approximately 60% faster feature work after adoption (informal team estimate).
- Grew the design function from one to three designers, reviewed pull requests and coached developers on CSS architecture, component use and UI quality.
- Secured formal investment in the design system by demonstrating the measured difference between fragmented delivery and a reusable product foundation.

WORK EXPERIENCE - CONTINUED

Trasis (via CTG)

Senior UI/UX Designer | 2019 - 2021 | Belgium

Led end-to-end design of the QC1 interface for a radiopharmaceutical quality-control device in a safety-critical operational domain.

- Designed realistic device visualisations for valves, columns, injectors, pipelines and schedules so the interface matched technicians' physical mental model.
- Designed for visual impairment from the start with redundant encodings using pattern, text and hierarchy in addition to colour.
- Task-based testing reported 85% task success and approximately three-times faster prototyping after the component approach (team-reported estimates; formal baselines were not retained).
- Established Nx/Angular, ITCSS/BEM and Storybook foundations, then coached the internal developer who took over the front-end system.

Sopra Banking Software

Senior UI/UX Designer | 2018 | Belgium

Modernised front-end foundations and design workflows for enterprise banking software.

- Introduced BEM and replaced Bootstrap 3's float-based layout with a custom Flexbox grid, reducing UI technical debt.
- Initiated a design-system direction combining documentation, reusable components and hands-on coaching for a junior front-end team.

Base (Design is Dead / Emakina)

UI Developer | 2016 - 2018 | Belgium

Delivered responsive, cross-browser product UI for high-traffic telecom sites and applications in Adobe Experience Manager.

- Built reusable interface components and introduced BEM to improve CSS structure across Base and Telenet work.
- Added npm tooling and automatic reload workflows that removed manual compile cycles from front-end changes.

Earlier experience: Front-End Developer, Stepstone (2015) | Web Designer, BTI Belgium (2011-2015) | Web Design Trainer, JL Gestion (2010-2011)

EDUCATION

BAC Design & Web Development - Format 21, La Louviere (2009-2010)

BAC Fine Arts (Drawing) - ESAPV Mons (2005-2008)

LANGUAGES

Spanish (native) | French (native/bilingual) | English (fluent) | Dutch (basic) | Portuguese (basic)
