PROFILE

Product designer and UX engineer with 15+ years across enterprise healthcare, mobility, banking and telecom. Leads system strategy and implements it hands-on, connecting product research to reusable UI, token pipelines, CSS architecture and developer tooling. At Solidaris, sole lead and implementer of Plectrum, an AI-first design system, from agent and contracts to governance, foundations and CI.

CORE EXPERTISE

Design-system architecture and governance | Storybook | Figma | Design tokens and CSS sources of truth | Angular / TypeScript | PrimeNG | ITCSS / BEMIT | Contract-Driven Development and CI | AI agents and MCP | UX research and prototype testing | Information architecture | Accessibility (WCAG AA)

EXPERIENCE

Solidaris (via Cegeka)

UX Engineer / Design System Owner | Oct 2025 - Present | Assignment ends 8 October 2026

Sole lead and implementer of Plectrum, an AI-first design system, alongside product design across iShare, iCRM and an initial iGED draft. Built on the existing PrimeNG/Plectrum UI Kit foundation.

- Built /plectrum, an agent that recommends what to reuse or compose from the installed component catalogue and workflow rules, served by a versioned Plectrum MCP alongside Figma, PrimeNG and Storybook MCPs.
- Applied Contract-Driven Development: colocated metadata, a process contract, a team registry and protocols generate the catalogue, indexes and documentation shared by developers and agents.
- Redesigned governance after stakeholder feedback: teams build locally without approval; the agent raises reuse, usage reports reach Core on merge, and Core promotes what is worth sharing.
- Built a developer toolkit that installs Angular and Storybook targets, SCSS layers, tests, CI and agent instructions in an application, with conflict-aware upgrades.
- Designed and implemented both token flows between Figma and code, with designer review. Made compiled CSS the source of truth and built Storybook and every foundation.
- Implemented CI gates for metadata/API alignment, token drift and generated files. Added opt-out telemetry and a Core dashboard that turns usage and search data into inspectable recommendations.
- Led product research, workshops and prototype testing. Released 2.1.0 with toolkit 0.7.2 and prepared the handoff in the starter, contracts, Storybook and runbooks.

Case study: danielbodigil.com/work/solidaris

Bridgestone (via CTG/Cegeka)

UX Engineer / Design System Owner | Jun 2019 - Jun 2025

Progressed from sole designer to leading design workflows on FleetBridge, a fleet-management platform, and built its design-system foundation.

- Made CSS the source of truth for production UI and live Storybook foundations, with documentation populated from the browser CSSOM.
- Architected SCSS across eight ITCSS layers with BEM naming and a browser-derived colour system built from 15 base hues for two themes.
- Delivered reusable components and guidelines; the development team reported approximately 60% faster feature work after adoption (informal team estimate).
- Grew the design function from one to three designers, reviewed pull requests and coached developers on CSS architecture, component use and UI quality. Secured investment in the design system.

Daniel Bodi Gil

Product design, systems and engineering | Experience continued

Trasis (via CTG)

Senior UI/UX Designer | 2019 - 2021

Led end-to-end design of the QC1 interface for a radiopharmaceutical quality-control device in a safety-critical operational domain.

- Designed realistic device visualisations for valves, columns, injectors, pipelines and schedules, matching technicians' physical mental model.
- Designed for visual impairment from the start: status used pattern, text and hierarchy as well as colour.
- Task-based testing reported 85% task success and approximately three-times faster prototyping after the component approach (team-reported estimates; formal baselines were not retained).
- Established Nx/Angular, ITCSS/BEM and Storybook foundations, then coached the internal developer who took over the front-end system.

Sopra Banking Software

Senior UI/UX Designer | 2018

Modernised front-end foundations and design workflows for enterprise banking software.

- Introduced BEM and replaced Bootstrap 3's float-based layout with a custom Flexbox grid, reducing UI technical debt.
- Initiated a design-system direction combining documentation, reusable components and hands-on coaching for a junior front-end team.

Base (Design is Dead / Emakina)

UI Developer | 2016 - 2018

Delivered responsive, cross-browser product UI for high-traffic telecom sites and applications in Adobe Experience Manager.

- Built reusable interface components and introduced BEM to improve CSS structure across Base and Telenet work.
- Added npm tooling and automatic reload workflows that removed manual compile cycles from front-end changes.

EARLIER EXPERIENCE

Front-End Developer, Stepstone | 2015

Web Designer, BTI Belgium | 2011 - 2015

Web Design Trainer, JL Gestion | 2010 - 2011

EDUCATION

BAC Design & Web Development - Format 21, La Louviere | 2009 - 2010

BAC Fine Arts (Drawing) - ESAPV Mons | 2005 - 2008
